

docuflow®

SAP Certified
Integration with SAP S/4HANA

SAP Certified
Built with SAP Business Technology Platform

BY  **VERSAFILE**

First off, thank you for being a docuflow customer in 2025.

I'm Sean Fitzpatrick, Co-Founder of docuflow. At docuflow, our focus: delivering modern, scalable, and clean-core-aligned SAP content solutions that help organizations simplify integrations, automate processes, and accelerate meaningful business outcomes.

Q4 marked an important milestone for our team with the release of docuflow 6.10—the most significant update in our product's history. This release was purpose-built to help enterprises advance their adoption of SAP Clean Core principles and set a strong foundation for the year ahead.

Thank you for your continued trust and partnership as we move into 2026. We value your feedback and look forward to supporting your SAP content strategy in the months ahead.

— Sean Fitzpatrick

What's New in docuflow 6.10

Four foundational clean core capabilities, now live.

- 🏠 Home
- 🔗 Connections
- 🗺️ Mappings
- 📄 CRUD Operations
- ★ Clean Core
- 📁 Profiles
- 📊 System Health
- 🔄 Config Backup
- 📜 Certificates
- 📄 Log Viewer
- 👤 Users
- ⚙️ Settings

Welcome to docuflow

The leading solution between SAP® and your content repository.

SAP Clean Core

Advanced features for SAP Clean Core architecture and compliance. Enhance your integration with metadata augmentation, intelligent routing, and OData connectivity.

NEW

Event Processor

Required for Metadata Augmentation and Document Routing

NEW

Metadata Augmentation

Enhance and transform document metadata automatically

NEW

Document Routing

Configure intelligent document routing rules

NEW

SAP Link

Automatically link documents to SAP attachments when dropped into configured content repositories

NEW

Tracking Service

Track documents between moves (SharePoint only)

ESSENTIAL

Core Workflow

Six fundamental steps to configure your SAP content management integration

1

Manage a Connection

Configure SAP and content repository connections

2

Configure Outbound Rules

Set up RFC destinations and routing

3

Setup Inbound Rules

Configure inbound document routing

4

Document Operations

Create, read, update, delete, and search documents

5

Load Types/Metadata

Import document types and schemas

6

Manage Users

Create and manage user accounts and permissions

■ Intelligent Document Routing

Automatically route documents based on metadata, file type, business rules, or SAP context — all through simple configuration.

Use Cases

- Route invoices by vendor or amount
 - Distribute HR files by department
 - Trigger urgent escalation workflows
- Streamlines operations • Maintains audit trails • Scales without extra headcount

■ Metadata Augmentation (OData)

Enrich documents with live business data from SAP using point-and-click OData field mapping.

Use Cases

- Add customer data to invoices
- Populate vendor info on contracts
- Enrich HR documents with employee details

Eliminates duplicate entry • Improves searchability • Ensures metadata consistency

■ ■ Event Processor

A resilient asynchronous engine built for high-volume processing, auto-recovery, and hands-off reliability.

Key Improvements

- Direct SAP link creation
- Auto-recover from network/SAP downtime
- Run overnight batch processes reliably

Self-healing • Zero manual recovery • Enterprise-grade scalability

■ SAPLink3 OData Integration

A next-generation SAP connectivity layer with faster linking, improved error handling, and support for complex structures.

Use Cases

- Handle month-end peak invoice volumes
- Complex structure support
- Auto-generated document IDs
- Enhanced error handling

Simplifies setup • Supports clean-core linking • Improves lifecycle handling

Additional Features

Legacy System Migration (IXOS Support)

- Connect directly to IXOS → S3 archives
- Import metadata + folder structures
- Maintain audit trails and document IDs
- Avoid downtime and data duplication

Enhanced ECM Platform Support

- IBM CM8 — CMIS operations, MDG attachments, optimized retrieval
- SharePoint — Permission cleanup, improved reliability
- Box — Network retry logic, large file support
- FileNet P8 — Async operations, faster connectivity

Configuration Enhancements

- Visual rule builder for routing
- Metadata Augmentation Designer
- SAP & SharePoint connection wizards

New Administrative Tools

- Failed Queue Interface
- Event Processor Activity Monitor
- System Health Dashboard
- Profile Manager
- UI-based backup/restore + certificate monitoring

Security & Performance Upgrades

- Encrypted configuration storage
- Secure password hashing
- Optimized threading and memory
- Connection pooling
- Faster TIFF → PDF conversion

Why Clean Core Matters

A future-proof SAP architecture — by design.

Zero Custom Code	All logic configured, not developed
Upgrade Safety	Nothing breaks during SAP updates
Reduced Technical Debt	Clean, maintainable configurations
Faster Deployment	No dev cycles required
Lower TCO	Simplified operations, lower cost of ownership

Customer Success Story

Modernizing SAP Content with a Cloud-First Approach

docuflow modernized SAP content management for a global technology provider by replacing its legacy OpenText archive with a unified, cloud-based integration. Nearly 8 million SAP documents were migrated to Microsoft 365 with 99.9% accuracy and zero business disruption.

Key Wins:

- Retired on-prem infrastructure and reduced licensing costs
- Automated metadata and lifecycle governance
- Seamless access to documents across ECC and Ariba
- A compliant, scalable foundation ready for future SAP transformation

Use Case of the Quarter

Accelerating AP Invoice Processing with SAP + docuflow

Managing high volumes of invoices across vendors, regions, and formats can be slow and error-prone. Many organizations struggle with manual routing, inconsistent metadata, and delayed visibility in SAP.

The Challenge: Traditional invoice workflows often rely on email-driven handoffs, manual uploads, and custom SAP code—slowing approvals and increasing compliance risk.

How docuflow Helps:

- Automated invoice routing
- Metadata enrichment from SAP
- Direct linking to purchase orders
- Real-time access inside SAP

The Outcome: AP teams process invoices faster, reduce exceptions, and eliminate manual steps—improving cashflow visibility and lowering processing costs.
